Complete the answers to the questions below to complete your project report. Create a PDF of the completed document and submit the PDF with your project.

Question	Your answer:
Step 2: Domain Choice What domain did you choose to fine-tune the Meta Llama 2 7B model on? Choices: <ol style="list-style-type: none">1. Financial2. Healthcare3. IT	Choice : IT
Step 3: Model Evaluation Section What was the response of the model to your domain-specific input in the model_evaluation.ipynb file?	<i>Traditional approaches to data management such as > relational databases and data warehouses have been designed to support structured data, which is limited to a single data type, such as text, numbers or dates. However, as organizations have increasingly embraced the Internet of Things, and the data generated by connected devices, they have had to develop</i>
Step 4: Fine-Tuning Section After fine-tuning the model, what was the response of the model to your domain-specific input in the model_finetuning.ipynb file?	Traditional approaches to data management such as > [{"generated_text": ' data lakes, data warehouses and data marts are failing to meet the needs of modern data management. Traditional data management approaches are not capable of managing and processing large amounts of data at scale.\n\nIn this whitepaper, we discuss how modern data management approaches such as data virtualization are helping"}]
